

I would like to make a case for the renewal of the above to enable the sale of specialist lamps that there is no replacement available for, effected lamps such as P-VIP; HBO; HBO IC; SIRIUS HRI; and UltraVitalux, are all specialised products for the Events, scientific and medical industries and mercury is needed for them to operate, I know all suppliers are looking to reduce the levels used to the lowest possible but until there is a solution these lamps are still required to enable the continued use of existing products.
