Feedback on evaluation of exemption under RoHS directive 4 (f)

We are a manufacturer of wooden floors and we have factories located in EU and Russia, and we are 1700 employees, main part of them within EU.

On our production sites we have several coating-lines installed in where we use mercury lamps for curing.

We have evaluated LED as an alternative method for curing, from what we can see at this point is that it's not possible to fully replace mercury lamps.

If there will be no exemption, we will have limited possibilities to continue producing our wooden floors within EU.

Regards
